

## Difference between KAMLOK 633-C and 633-CT, 633-E and 633-ET

The difference between KAMLOK 633-C / 633-E and 633-CT / 633-ET is the difference in the outer diameter of the shank where the hose is inserted. 633-CT / 633-ET is narrower than the 633-C / 633-E and is used to be inserted into hoses that do not easily expand, such as suction hoses in general.

**Note :** If the size does not match, fluid leakage or coupling disconnection may occur.

- ※ Materials available include aluminum alloy, stainless steel, which may be selected according to fluid, powder and granular materials, gas, etc.
- Product specifications and applicability of hoses and couplings vary depending on size and hose types, so please check the product detail pages and the website, etc.
